

SUCHIR GANESH JAIGANESH

Computer Science Student | AI, Software Engineering & Data-Driven Applications

Subang Jaya, Malaysia | +60 13-362 7319 | suchirganesh18102005@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

SUMMARY

Computer Science student at Monash University Malaysia with hands-on experience in AI applications, Java object-oriented design, TypeScript/RxJS development, RAG systems and Python-based data workflows. Selected as a Research Intern under the Monash IT Student Research Scheme 2025, with portfolio projects spanning cloud security, document AI, game systems and sustainable energy analytics.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, SQL

Frameworks & Tools: React, FastAPI, Streamlit, SQLite, Git, GitHub, Tailwind CSS, Vite

AI & Data: RAG, embeddings, semantic search, NumPy, Pandas, forecasting, data preprocessing

Concepts: Object-Oriented Programming, Functional Programming, Data Structures, Algorithms, Databases

EXPERIENCE

Research Intern - Monash IT Student Research Scheme 2025

Nov 2025 - Feb 2026

Monash University Malaysia

- Selected for a research internship focused on forecasting models, intelligent systems and sustainable energy analytics.
- Explored tropical building energy behaviour using Python-based preprocessing, modelling experiments and pattern analysis.
- Contributed to workflows involving open datasets, forecasting approaches and technical documentation.

Founder & Python Tutor - CodeTerinity

May 2025 - Present

Remote

- Founded a beginner-focused Python tutoring initiative, delivering personalised 1-on-1 programming lessons.
- Designed coding exercises and learning pathways for Python fundamentals, logic building and problem solving.
- Adapted lessons to each student's pace and goals, strengthening mentoring, communication and teaching skills.

Technical Intern - Mechmet Engineers

Nov 2024 - Jan 2025

Coimbatore, India

- Practised Python, Pandas, NumPy, data structures and introductory machine learning through hands-on data tasks.
- Completed practical exercises in data manipulation, numerical computing and technical problem solving.

Marketing & Strategy Intern - TeaMWork Global Internship Programme

Jun 2025 - Jul 2025

Remote / Global

- Collaborated in a multicultural team on research, strategy and campaign design across technology and education contexts.
- Supported user research and case study analysis to identify inclusive employment and education opportunities.

PROJECTS

EureGuard - AI Cloud Security & Energy Optimisation Dashboard | React, TypeScript, FastAPI,

SQLite, Python, Ollama

GitHub

- Built a hackathon prototype for construction cloud monitoring using simulated resources, audit logs and alert flows.
- Implemented a safety-first architecture where deterministic rules handle decisions while the LLM only explains alerts.
- Added dashboard views, audit logging, Telegram/Gmail alert flows and human approval logic for security actions.

Advanced RAG Assistant | Python, Streamlit, MiniLM, Semantic Search

GitHub

- Developed an offline document Q&A assistant using RAG, text chunking, embeddings, semantic retrieval and local AI workflows.
- Built document upload, extraction and response pipelines for document-grounded question answering.
- Strengthened skills in embedding models, retrieval pipelines and local-first AI application design.

Eclipse Nebula - Java Object-Oriented Game | Java, OOP, UML, Software Design

GitHub

- Developed a Java text-based game in a team project using actors, maps, actions, behaviours and interactive mechanics.
- Used UML class and sequence diagrams to model system structure, object relationships and game interactions.
- Collaborated through implementation, testing and debugging across a modular Java codebase.

Flappy Birb - Functional Reactive Programming Game | TypeScript, RxJS, SVG

GitHub

- Built a browser-based Flappy Bird-style game using RxJS streams, SVG rendering, gravity and collision detection.
- Implemented scoring, lives, restart flow and game-ending conditions using functional reactive programming concepts.
- Applied event-driven design to manage state changes, user input and browser-based game rendering.

EDUCATION

Bachelor of Computer Science - Monash University Malaysia

Jul 2024 - Present

Relevant Coursework: Object-Oriented Design, Data Structures and Algorithms, Programming Paradigms, Databases, Artificial Intelligence, Data Science

LEADERSHIP

Head of Industrial Relations - MUMTEC | Industrial Outreach Lead - MIND ENGINE Expo 2026

Supported student-industry engagement through outreach, partnerships, sponsorship discussions and event collaboration.

- Built communication and coordination experience through company outreach, partnerships and student-facing events.
